

VITAL4 TRACE

Data is sourced from both **public** and **private** application data, telecommunications, county and court records, and many other auxiliary sources to cover an estimated **95%** of the adult population.

VITAL4TRACE is the only SSN Trace solution available in this market that provides data from two of the three primary Credit Bureaus, along with the largest alternative header file available.

When side-by-side tested against the top providers of SSN Trace solutions in the background screening industry, VITAL4TRACE provides compelling strengths to be considered:

- On average VITAL4TRACE provided a 97% hit rate versus 93% from other competitors.
- On average VITAL4TRACE provides 3x more unique names associated with SSNs.
- Results provide substantially higher DOB coverage with more accuracy identified.
- VITAL4TRACE has almost 3x more addresses associated with SSNs.

VITAL4 is the exclusive provider of this solution for the CRA market.

vital4.net

FEATURES

- ✓ Client/User controls customized parameters which adjust how the input criteria is interpreted and the filters change which data points are returned
- ✓ Customizable filtering logic available: SSNSearch, DOB Search, address, non-primary first/last names, single character first/last names, partial DOB, include/exclude based on address/date range
- ✓ The data is sourced from major bureaus as well as the largest alternative and consumer files used to find no file and thin file people
- ✓ A database covering over 300mm people with historical and current data that extends beyond 30 years gives insight and linking needed to understand one's history

BENEFITS

-  **Proprietary access to auxiliary data**, allowing us to pick up on 30+ years of historical address data that may not otherwise be found in traditional data sources
-  **Improves screening efficiency** and removes duplicate information through machine learning and advanced linking algorithms
-  **Reduces cost, time and frustration** with fully customizable search and filter logic
-  **Easy to use and integrate** into our API with additional platforms coming soon
-  **Massively scalable and cost-effective** through our state-of-the-art cloud-based platform
